

Job description

Location: London/South East

Salary: Competitive (depending on experience), company vehicle if required + benefits

Theiscraft Lighting Controls is looking to expand our field-based Commissioning team. The team commissions our control systems on site to the client or lighting designers' requirements. Our projects include large commercial buildings, hotels, schools and high end residences.

You will manage your projects from initial site visit through the on-site commissioning process to customer training, handover and completion. Working closely with contractors and end users it's important you have a positive attitude, the ability to problem solve and are able to work using your own initiative with attention to detail and drive.

The role:

Commissioning Engineer – Lighting Controls

- As a Commissioning Engineer you will be mainly site based in London and the South East, but willing to travel if projects require.
- Commissioning and on-site client demonstration of the system.
- Mark up as installed drawings accurately for Head End PC and office records
- Assist the main office to prepare O&M manuals
- Carry out on-site maintenance contract visits and support on call outs
- System training will be provided.

The ideal candidate:

- Has an electrical/engineering qualification (or equivalent).
- Has a background in electrical contracting / controls commissioning, although a mechanical / service background for an OEM would also be considered.
- Have good project management skills and the ability to organise and manage their work.
- Has a high level of accuracy and attention to detail.
- Will possess good diplomacy and communication skills, as well as the ability to work well within teams.
- Will be very proactive and driven.
- Must be willing to travel to site and work out of hours/weekends as and when needed.
- Full UK driving licence
